

## **Short Conference Report**

The 15th EMS Annual Meeting & 12th European Conference on Applications of Meteorology was attended by \_\_\_ participants from all over the world in Sofia, Bulgaria to discuss multiple aspects of climatology and meteorology.

It has been a great experience for me because over that week I enjoyed a rich opportunity to share my ideas and experiences with colleagues from around the world. I was given the opportunity to present my work concerning microclimate and human health in front of my colleagues and great scientists. Their questions and notices were extremely useful and inspired me to go on with my investigation area in the field of bioclimatology.

My own presentation was about "*Present and Future Human Thermal Bioclimatic Conditions and Impacts on Cardiovascular Admissions in Crete Island, Greece*" attempting to evaluate and analyze bio-climatic conditions of the island using thermal indices based on the humans' energy balance. So it can be useful for drawing up appropriate health plans and implementing suitable preventive measures and interventions.

In addition I was given "The Young Scientist Travel Award 2015", which made me excited and gave me the motive for further hard work. Such awards and meetings make young scientists feel useful, trying to offer with their scientific work and research.

The conference was successful organized as we all became aware of the ceremony of special events and the variety of sessions. High quality keynote and technical papers were presented, with topics covering topics from Meteorology and Climatology. The technical sessions were well represented with posters and oral presentations. Such a diverse representation from both industry and universities from around the globe confirms the international nature and popularity of this conference.
