

12th EMS - 9th ECAC Conference Report

First of all, I would like to really thank the EMS committee for choosing me as a winner of one of the Young Scientist Travel Awards (YSTA), and offer me the opportunity to attend to the 12th EMS Annual Meeting and 9th European Conference on Applied Climatology (ECAC) in Łódź (Poland) from the 10th to the 14th of September 2012.

It was a very great opportunity for me to show the scientific community my work and my currently research about observational analyses and numerical simulations of radiation fogs over the CIBA (Research Centre for the Lower Atmosphere) site in Spain. More specifically, I gave a talk entitled “2011-2012 winter radiation fogs at CIBA (Spain): Observations compared to WRF simulations using different PBL parameterizations”. The corresponding session was the ASI3 (Formulation, validation and parameterization of small-scale processes in atmospheric modelling). This was a very interesting session and highly focused on studies related to my research.

This session, and others within the group “Atmospheric System and its interactions” were very useful for me, giving me new ideas that I am going to carry out in a soon future, and that I think they can improve my methodology and my PhD studies in general.

Besides this group, I could take a look at some posters about climatology and I found them very interesting and curious.

I also received some questions after my talk of researchers interested in my work and it was a great opportunity to meet new people involved in these topics. I hope to keep in touch with them because is a beautiful way to help each other.

Again, thanks for this splendid opportunity, the conference was top.
